Hopf Module Algebras

Brandon Mather

UNT Master's

History

- (1939) Heinz Hopf works on homology of sphere groups
- (1969) Moss Sweedler writes seminal book "Hopf Algebras"
- (1986) Vladimir Drinfeld gives ICM address on quantum groups
- (1992) Susan Montogomery writes "Hopf Algebras and Their Actions on Rings"

Goal

To understand the actions of Hopf algebras on other algebras

Quantum Plane

Notation: $\mathbb{C}[v_1,\ldots,v_n]=\mathbb{C}\langle v_1,\ldots,v_n\mid v_jv_i-v_iv_j\rangle$

Quantum Polynomial Ring

Let $Q = (q_{ij})$ be an $n \times n$ matrix of roots of unity where

$$q_{ii}=1=q_{ji}q_{ij}$$

.

A quantum polynomial ring is

$$\mathbb{C}_{Q}[v_{1},\ldots,v_{n}]=\mathbb{C}\langle v_{1},\ldots,v_{n}\mid v_{j}v_{i}-q_{ij}v_{i}v_{j}\rangle$$

Example: $\mathbb{C}_{-1}[v_1, v_2] = \mathbb{C} \langle v_1, v_2 | v_1 v_2 + v_2 v_1 \rangle$

Motivation

• When a grp G acts on a space V by automorphisms, the action can be extended to $V \otimes V$ by $g \in G$ acting as

$$g\otimes g=\triangle(g).$$

Then \triangle defines a coproduct map

$$\triangle: \mathbb{C}G \to \mathbb{C}G \otimes \mathbb{C}G.$$

For arbitrary coproducts, $\triangle: A \to A \otimes A$, we call $g \in A$ grouplike if $\triangle(g) = g \otimes g$.

Motivation

• When a grp G acts on a space V by automorphisms, the action can be extended to $V \otimes V$ by $g \in G$ acting as

$$g\otimes g=\triangle(g).$$

Then \triangle defines a coproduct map

$$\triangle: \mathbb{C}G \to \mathbb{C}G \otimes \mathbb{C}G.$$

For arbitrary coproducts, $\triangle: A \to A \otimes A$, we call $g \in A$ grouplike if $\triangle(g) = g \otimes g$.

When a Lie alg $\mathfrak g$ acts on a space V, the action can be extended to $V\otimes V$ by $x\in \mathfrak g$ acting as $x\otimes 1+1\otimes x=\triangle(x)$. Again, \triangle defines a map $\mathfrak g\to \mathfrak g\otimes \mathfrak g$. For arbitrary coproducts, $\triangle:A\to A\otimes A$, we call $x\in A$ primitive if $\triangle(x)=x\otimes 1+1\otimes x$.

Motivation

1 When a grp G acts on a space V by automorphisms, the action can be extended to $V \otimes V$ by $g \in G$ acting as

$$g \otimes g = \triangle(g)$$
.

Then \triangle defines a coproduct map

$$\triangle: \mathbb{C}G \to \mathbb{C}G \otimes \mathbb{C}G.$$

For arbitrary coproducts, $\triangle: A \to A \otimes A$, we call $g \in A$ grouplike if $\triangle(g) = g \otimes g$.

When a Lie alg $\mathfrak g$ acts on a space V, the action can be extended to $V\otimes V$ by $x\in \mathfrak g$ acting as $x\otimes 1+1\otimes x=\triangle(x)$. Again, \triangle defines a map $\mathfrak g\to \mathfrak g\otimes \mathfrak g$. For arbitrary coproducts, $\triangle:A\to A\otimes A$, we call $x\in A$ primitive if $\triangle(x)=x\otimes 1+1\otimes x$.

This notion is dual to an algebra, creating a colagebra structure, C, with coproduct $\triangle : C \to C \otimes C$ and counit $\varepsilon : C \to \mathbb{C}$.

The unique 4-dim'l non-commutative, non-cocommutative Hopf alg given by M. Sweedler (1969):

$$H_4 = \langle g, x \mid g^2 = 1, x^2 = 0, gx = -xg \rangle$$

The unique 4-dim'l non-commutative, non-cocommutative Hopf alg given by M. Sweedler (1969):

$$H_4 = \langle g, x \mid g^2 = 1, x^2 = 0, gx = -xg \rangle$$

with operations $\triangle: H_4 \to H_4 \otimes H_4, \varepsilon: H_4 \to \mathbb{C}, S: H_4 \to H_4$

$$\triangle(g) = g \otimes g,$$
 $\triangle(x) = x \otimes 1 + g \otimes x$

The unique 4-dim'l non-commutative, non-cocommutative Hopf alg given by M. Sweedler (1969):

$$H_4 = \left\langle g, x \mid g^2 = 1, x^2 = 0, gx = -xg \right\rangle$$
 with operations $\triangle: H_4 \to H_4 \otimes H_4, \varepsilon: H_4 \to \mathbb{C}, S: H_4 \to H_4$
$$\triangle(g) = g \otimes g, \qquad \qquad \triangle(x) = x \otimes 1 + g \otimes x$$

$$\varepsilon(g) = 1, \qquad \qquad \varepsilon(x) = 0$$

The unique 4-dim'l non-commutative, non-cocommutative Hopf alg given by M. Sweedler (1969):

$$H_4=\left\langle g,x\mid g^2=1,x^2=0,gx=-xg
ight
angle$$
 with operations $\triangle:H_4 o H_4\otimes H_4,arepsilon:H_4 o \mathbb{C},S:H_4 o H_4$ $\triangle(g)=g\otimes g,\qquad \qquad \triangle(x)=x\otimes 1+g\otimes x$ $arepsilon(g)=1,\qquad \qquad arepsilon(x)=0$ $S(g)=g^{-1},\qquad \qquad S(x)=-x$

The unique 4-dim'l non-commutative, non-cocommutative Hopf alg given by M. Sweedler (1969):

$$H_4=\left\langle g,x\mid g^2=1,x^2=0,gx=-xg
ight
angle$$
 with operations $\triangle:H_4 o H_4\otimes H_4,arepsilon:H_4 o \mathbb{C},S:H_4 o H_4$ $\triangle(g)=g\otimes g,\qquad \qquad \triangle(x)=x\otimes 1+g\otimes x$ $arepsilon(g)=1,\qquad \qquad arepsilon(x)=0$ $S(g)=g^{-1},\qquad \qquad S(x)=-x$

Group-like

Primitive

The unique 4-dim'l non-commutative, non-cocommutative Hopf alg given by M. Sweedler (1969):

$$H_4 = \left\langle g, x \mid g^2 = 1, x^2 = 0, gx = -xg \right\rangle$$
 with operations $\triangle: H_4 \to H_4 \otimes H_4, \varepsilon: H_4 \to \mathbb{C}, S: H_4 \to H_4$
$$\triangle(g) = g \otimes g, \qquad \qquad \triangle(x) = x \otimes 1 + g \otimes x$$

$$\varepsilon(g) = 1, \qquad \qquad \varepsilon(x) = 0$$

$$S(g) = g^{-1}, \qquad \qquad S(x) = -x$$

Group-like

Primitive

Let τ be the 'flip' over the tensor product, so $\tau(u \otimes v) = v \otimes u$. Note that $\tau \circ \triangle(x) \neq \triangle(x)$, this is called non-cocommutativity.

Actions of Sweedler's Algebra

$$H_4$$
 acts on $\mathbb{C}_{-1}[\mathit{v}_1,\mathit{v}_2]$ by

$$g \cdot v_1 = v_1, \ g \cdot v_2 = -v_2, \ x \cdot v_1 = 0, \ x \cdot v_2 = v_1.$$

Actions of Sweedler's Algebra

 H_4 acts on $\mathbb{C}_{-1}[v_1, v_2]$ by

$$g \cdot v_1 = v_1, \ g \cdot v_2 = -v_2, \ x \cdot v_1 = 0, \ x \cdot v_2 = v_1.$$

We can express this action on the generators as

$$g \mapsto \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix}, \ x \mapsto \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix}.$$

The unique 8-dim'l non-commutative, non-cocommutative Hopf alg given by G. Kac and V. Paljutkin in "Finite Ring Groups" (1966):

$$H_8 = \left\langle x, y, z \mid x^2 = y^2 = 1, xy = yx, zx = yz, zy = xz, z^2 = \frac{1}{2}(1+x+y-xy) \right\rangle$$

The unique 8-dim'l non-commutative, non-cocommutative Hopf alg given by G. Kac and V. Paljutkin in "Finite Ring Groups" (1966):

$$H_8 =$$

$$\langle x, y, z \mid x^2 = y^2 = 1, xy = yx, zx = yz, zy = xz, z^2 = \frac{1}{2}(1+x+y-xy) \rangle$$

$$\triangle(x) = x \otimes x, \ \triangle(y) = y \otimes y,$$

$$\triangle(z) = \frac{1}{2}(1 \otimes 1 + 1 \otimes x + y \otimes 1 - y \otimes x)(z \otimes z),$$

The unique 8-dim'l non-commutative, non-cocommutative Hopf alg given by G. Kac and V. Paljutkin in "Finite Ring Groups" (1966):

$$H_8 =$$

$$\langle x, y, z \mid x^2 = y^2 = 1, xy = yx, zx = yz, zy = xz, z^2 = \frac{1}{2}(1+x+y-xy) \rangle$$

$$\triangle(x) = x \otimes x, \ \triangle(y) = y \otimes y,$$

$$\triangle(z) = \frac{1}{2}(1 \otimes 1 + 1 \otimes x + y \otimes 1 - y \otimes x)(z \otimes z),$$

$$\varepsilon(x) = \varepsilon(y) = \varepsilon(z) = 1,$$

The unique 8-dim'l non-commutative, non-cocommutative Hopf alg given by G. Kac and V. Paljutkin in "Finite Ring Groups" (1966):

$$H_8 =$$

$$\langle x, y, z \mid x^2 = y^2 = 1, xy = yx, zx = yz, zy = xz, z^2 = \frac{1}{2}(1+x+y-xy) \rangle$$

$$\triangle(x) = x \otimes x, \ \triangle(y) = y \otimes y,$$

$$\triangle(z) = \frac{1}{2} (1 \otimes 1 + 1 \otimes x + y \otimes 1 - y \otimes x)(z \otimes z),$$

$$\varepsilon(x) = \varepsilon(y) = \varepsilon(z) = 1,$$

$$S(x) = x, \ S(y) = y, \ S(z) = z.$$

Actions of Kac-Paljutkin Algebra

$$H_8$$
 acts on $\mathbb{C}_q[v_1,v_2]$ where $q^2=-1$ by

$$x \mapsto \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix} \quad y \mapsto \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix} \quad z \mapsto \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}.$$

Actions of Kac-Paljutkin Algebra

$$H_8$$
 acts on $\mathbb{C}_q[v_1,v_2]$ where $q^2=-1$ by

$$x \mapsto \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix} \quad y \mapsto \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix} \quad z \mapsto \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}.$$

And on $\mathbb{C}_Q[v_1, v_2, v_3, v_4]$ for

$$q_{12}=q_{34}^{-1}, \;\; q_{13}=q_{24}^{-1}, \;\; q_{14}^2=1, \;\; q_{23}^2=-1$$
 by

$$x \mapsto \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & -1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \quad y \mapsto \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & -1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \quad z \mapsto \begin{bmatrix} 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 \\ 0 & 1 & 0 & 0 \\ 1 & 0 & 0 & 0 \end{bmatrix}.$$

Actions of Kac-Paljutkin Algebra

 H_8 acts on $\mathbb{C}_q[v_1,v_2]$ where $q^2=-1$ by

$$x \mapsto \begin{bmatrix} -1 & 0 \\ 0 & 1 \end{bmatrix} \quad y \mapsto \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix} \quad z \mapsto \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}.$$

And on $\mathbb{C}_Q[v_1, v_2, v_3, v_4]$ for

$$q_{12}=q_{34}^{-1}, \;\; q_{13}=q_{24}^{-1}, \;\; q_{14}^2=1, \;\; q_{23}^2=-1$$
 by

$$x \mapsto \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & -1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \quad y \mapsto \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & -1 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \quad z \mapsto \begin{bmatrix} 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 \\ 0 & 1 & 0 & 0 \\ 1 & 0 & 0 & 0 \end{bmatrix}.$$

And on $\mathbb{C}_{-1}[v_1, v_2]$ by

$$x\mapsto \begin{bmatrix} 0 & 1\\ 1 & 0 \end{bmatrix} \ y\mapsto \begin{bmatrix} 0 & -1\\ -1 & 0 \end{bmatrix} \ z\mapsto \begin{bmatrix} 1 & 0\\ 0 & -1 \end{bmatrix}.$$

Described by P. Kulish and N. Reshetikhin in "Quantum linear problem..." (1983), leading Vladimir Drinfeld to quantum groups $\mathcal{U}_q(\mathfrak{sl}_2)=$

Let H be a Hopf alg and A an alg with a map $\alpha: H \otimes A \to A$. Then we say H acts on A by α if the following diagrams commute:

A is called a **module algebra** if the following also commute:

In words, H acts on A, iff $\forall h, h' \in H, \forall a \in A$

$$(hh')(a) = h(h'(a)), \quad 1_H(a) = a.$$

And A is an H-module alg iff H acts on A and $\forall h \in H, \forall a, a' \in A$

$$h(aa') = \sum h_i(a) \cdot h_j(a), \quad h(1_A) = \varepsilon(h)1_A$$

where $\triangle(h) = \sum h_i \otimes h_j$.

Semidirect Product

Let G and G' be groups where G' acts on G by automorphisms. Then one can define the semidirect product group, $G \rtimes G'$. The action can be extended to the group algebras, $\mathbb{C}G$ and $\mathbb{C}G'$. This will give the group algebra

$$\mathbb{C}(G \rtimes G') = \mathbb{C}G\#\mathbb{C}G'$$

with product $g'g = (g' \cdot g)g'$.

Smash Product Algebra

If H is a Hopf algebra and A an H-module algebra, then A#H is the smash product algebra defined as $A\otimes H$ as a vector space and with product

$$ha = \sum_{i} (g_i \cdot a) k_i$$

where $a \in A$, $h \in H$ and $\triangle(h) = \sum_i g_i \otimes k_i$.

Smash Product Algebra

"Group-like" and "Lie-like"

Let H be a Hopf algebra, define $G(H) = \{h \in H \mid \triangle(h) = h \otimes h\}$ and $P(H) = \{h \in H \mid \triangle(h) = h \otimes 1 + 1 \otimes h\}$.

G(H) is the set of grouplike elements of H and forms a group under the product.

P(H) is the set of primitive elements of H and forms a Lie algebra under the commutator bracket.

Cartier-Kostant-Milnor-Moore Theorem

Let H be a cocommutative Hopf algebra over \mathbb{C} , then

$$H \cong \mathcal{U}(P(H)) \# \mathbb{C}G(H)$$

as Hopf algebras.

As a corollary, any finite-dimensional Hopf algebra over $\mathbb C$ is isomorphic to a group algebra.

 Which actions on algebras by Hopf algebras factor through a group action? If the action does not factor through a group action, it is said to have "quantum symmetry".
